

HOW GREEN ARE OUR MAGAZINES?

Our magazines are printed on FSC certified paper, so you can be confident that this magazine isn't harming the world's forests.

The printing process is now very environmentally friendly. The printing plates are produced using chemical-free technology, these are then recycled after use. The print process uses inks that are vegetable based and alcohol-free printing solutions which eliminates the production of volatile organic compounds into the atmosphere. Our printers are always striving to lessen the impact on the environment for the greater good of everyone.
